

The background of the slide features a large, stylized cloud logo composed of several overlapping, rounded rectangular shapes. The cloud is rendered in a light blue color with a subtle gradient and is set against a darker blue background. The background is also filled with various small, semi-transparent icons related to technology, communication, and data, such as a smartphone, a laptop, a globe, a mail icon, and a speech bubble. The overall aesthetic is modern and digital.

SIGMA Cloud : An Open Academic and Research Environment

Parallel Session One – ICT Infrastructure & Security

Juan Jose Fuentes and Jordi Cuní
June 8, 2016

SIGMA AIE, is a non-profit higher education consortium created and led **by 10 reference Spanish universities**, to optimize Academic and Research with information technology. Implementing the **best practices of university management** that are reflected in SIGMA's tools and services, given the changing environment of the universities and higher education institutions.

SIGMA

ACADEMIC

Student Information System

SIGMA

RESEARCH

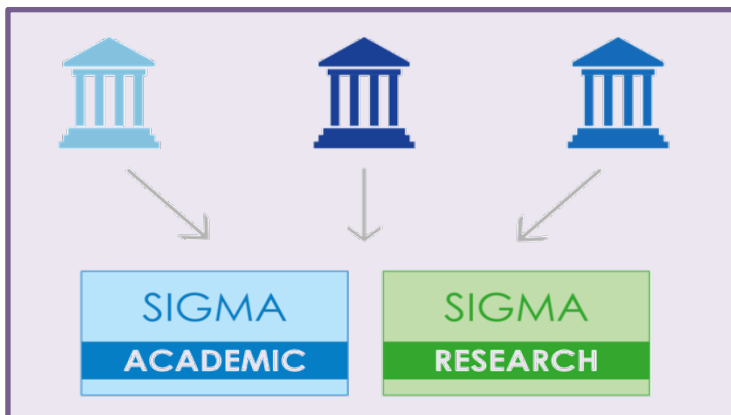

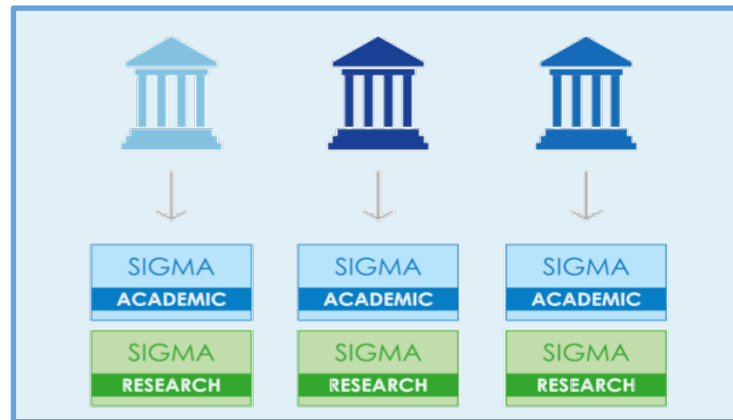

Current Research Information System

- Most of SIGMA Universities needs to **upgrade their hardware platforms.**
- SIGMA **invest in training their TIC staff** on new application server and databases administrator.
- **Funds in IT** department each year are **decreasing.**
- **Renew licenses** and its cots is another drawback

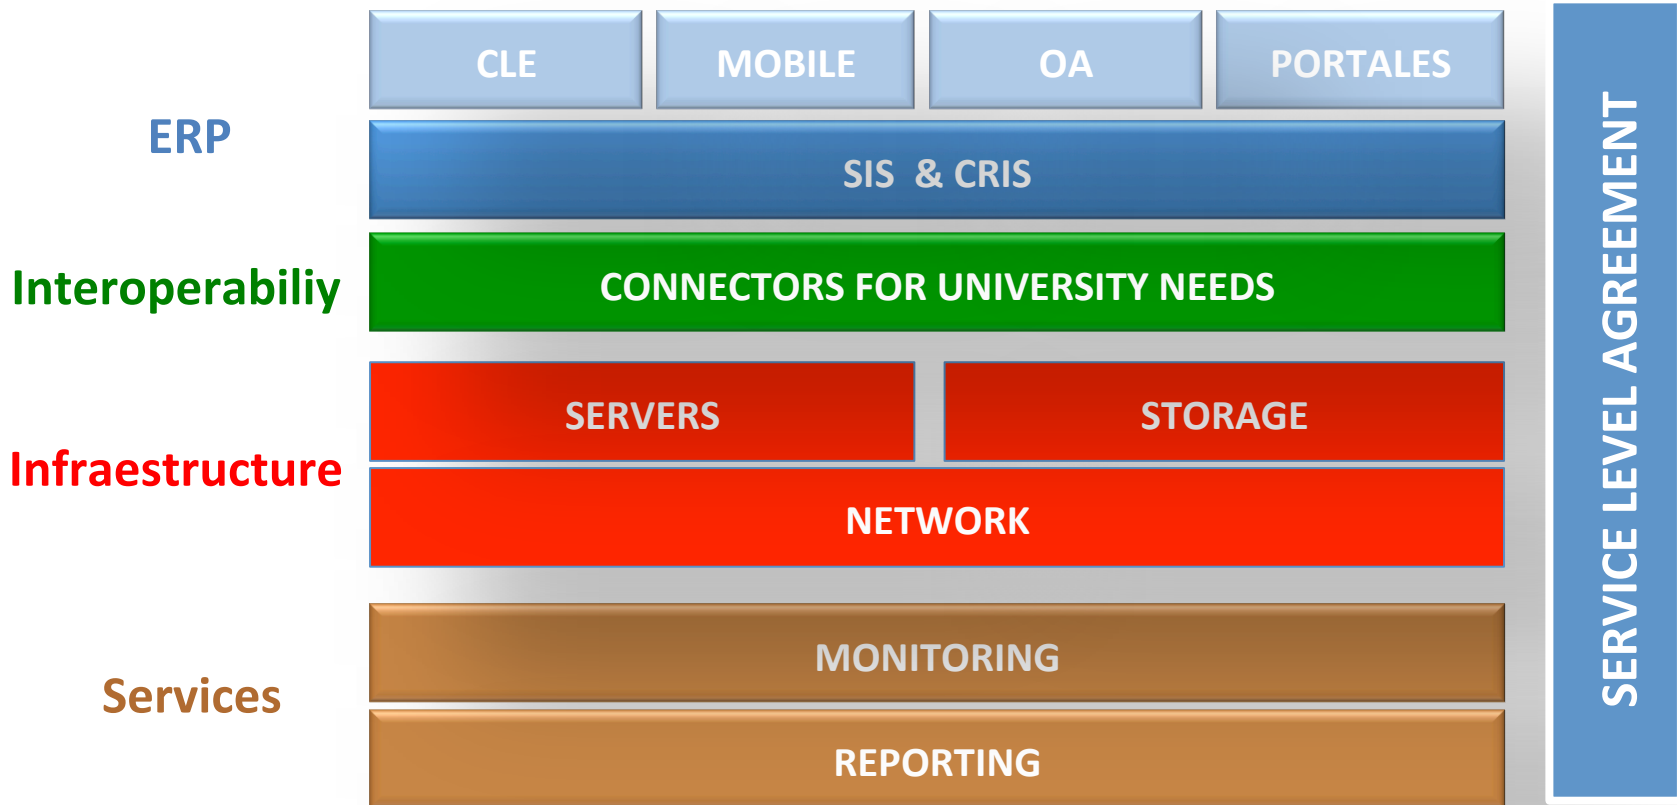

Isolated environment

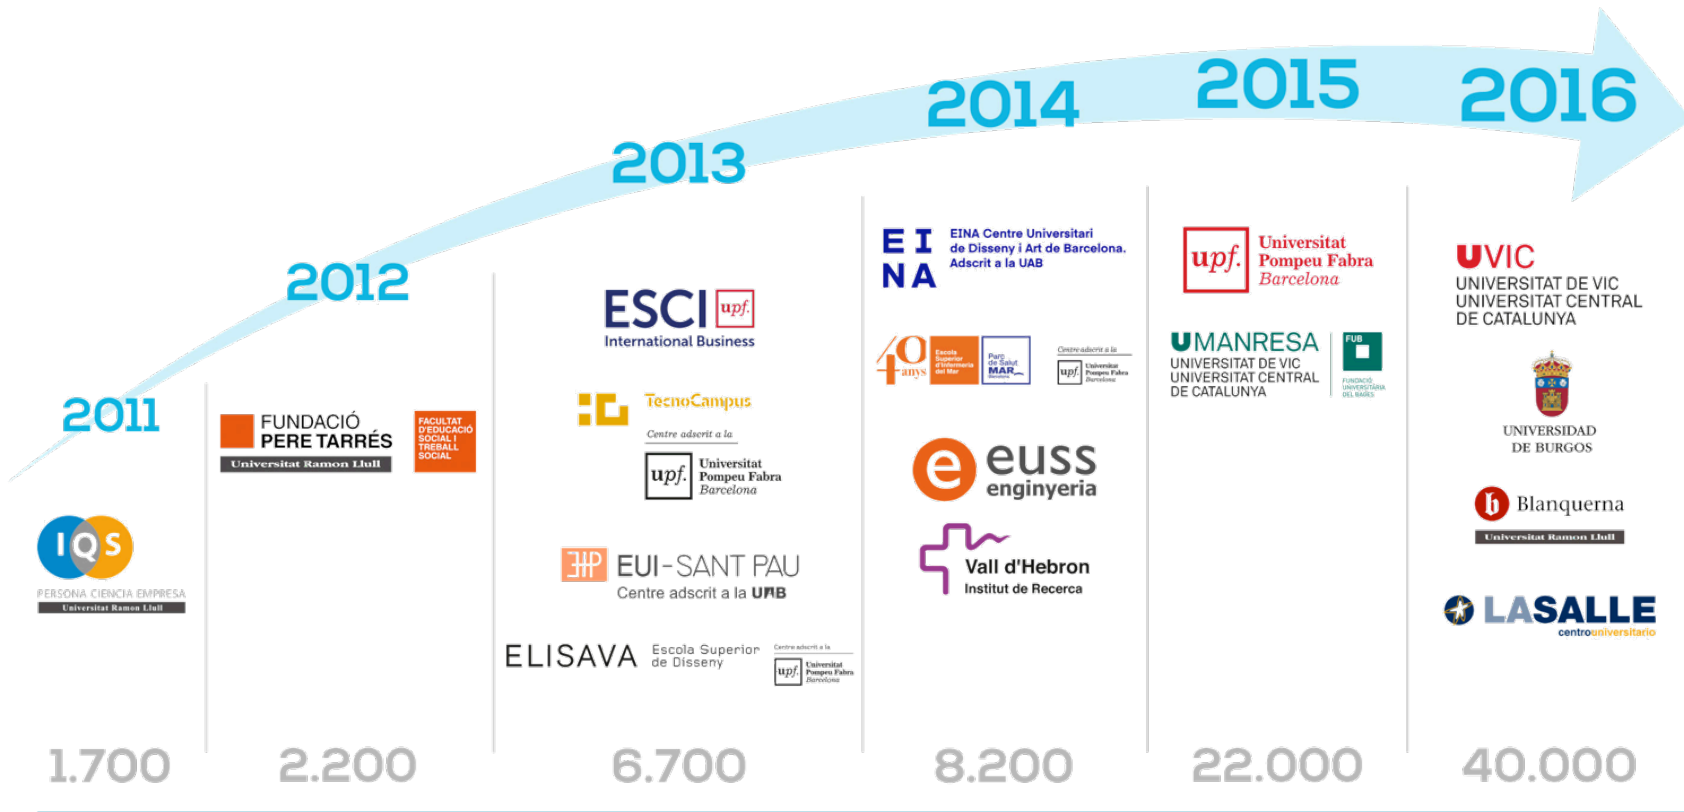

- + Completely version control deployment
- + Isolated environment
- + Suitable for big public universities

Shared environment

- + Share platform
- + Multi-tenant application environment
- + Suitable for small institutions and colleges

Accumulative students enrol

8.356 students enrol in single multi-tenant environment

Non in-person process

In person process

12.295 students enrol in single isolated environment

Non in-person process

In person process

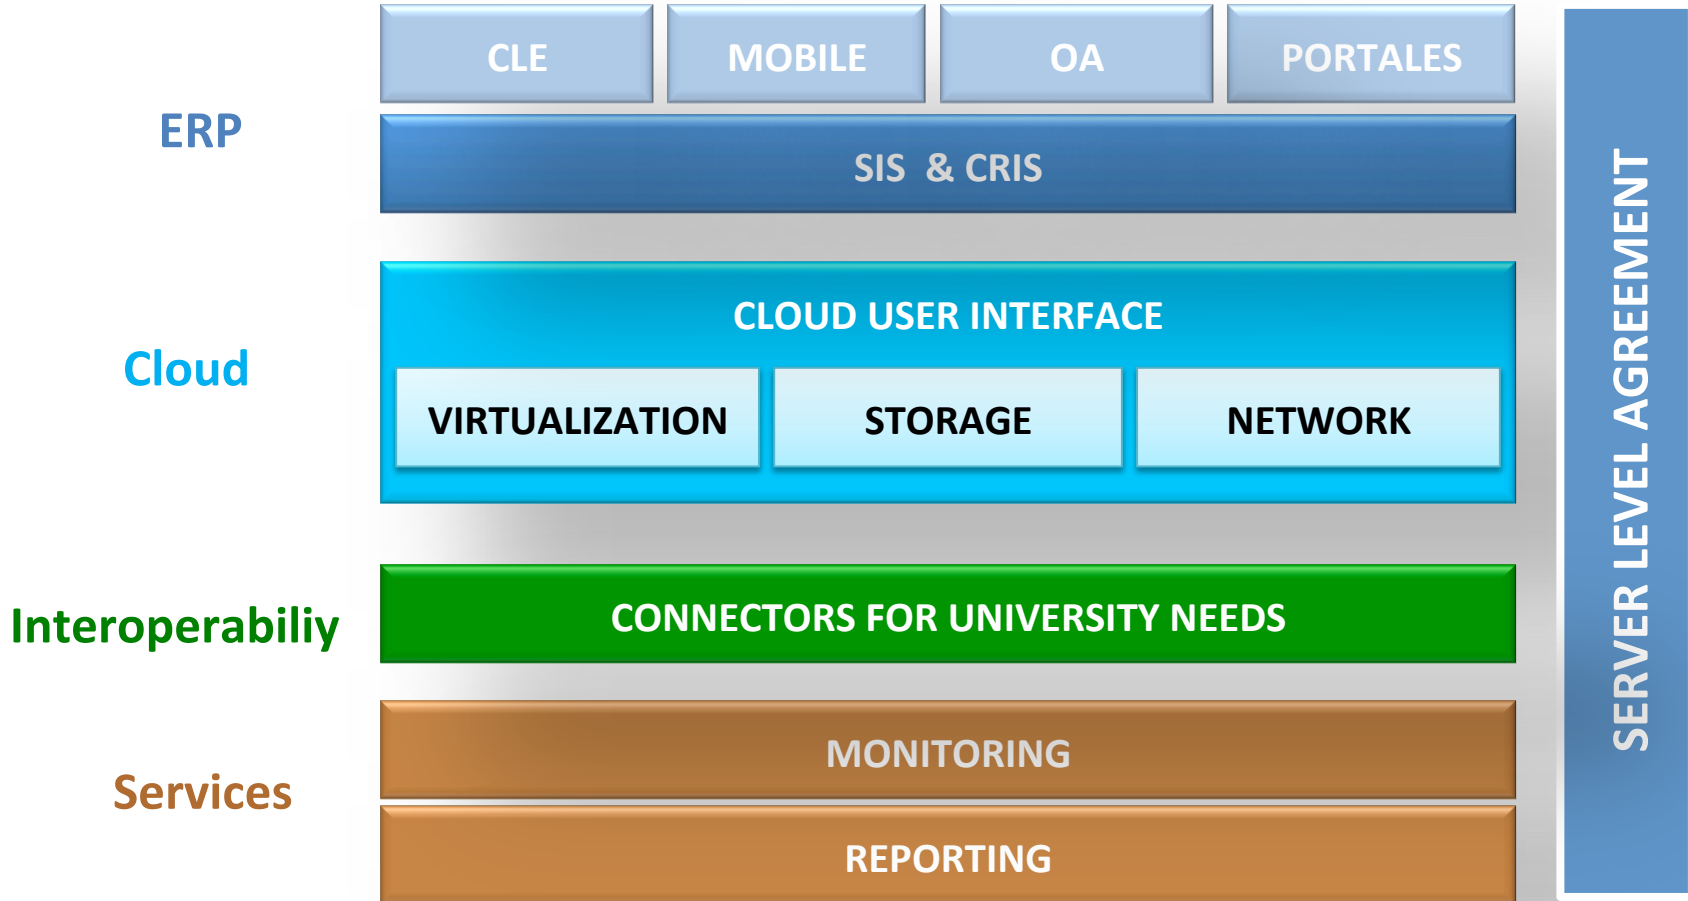

Platform 2015

- Availability 24x7
- Deployment without stopping service
- Service Level Agreement
- A platform and a service mature

New needs

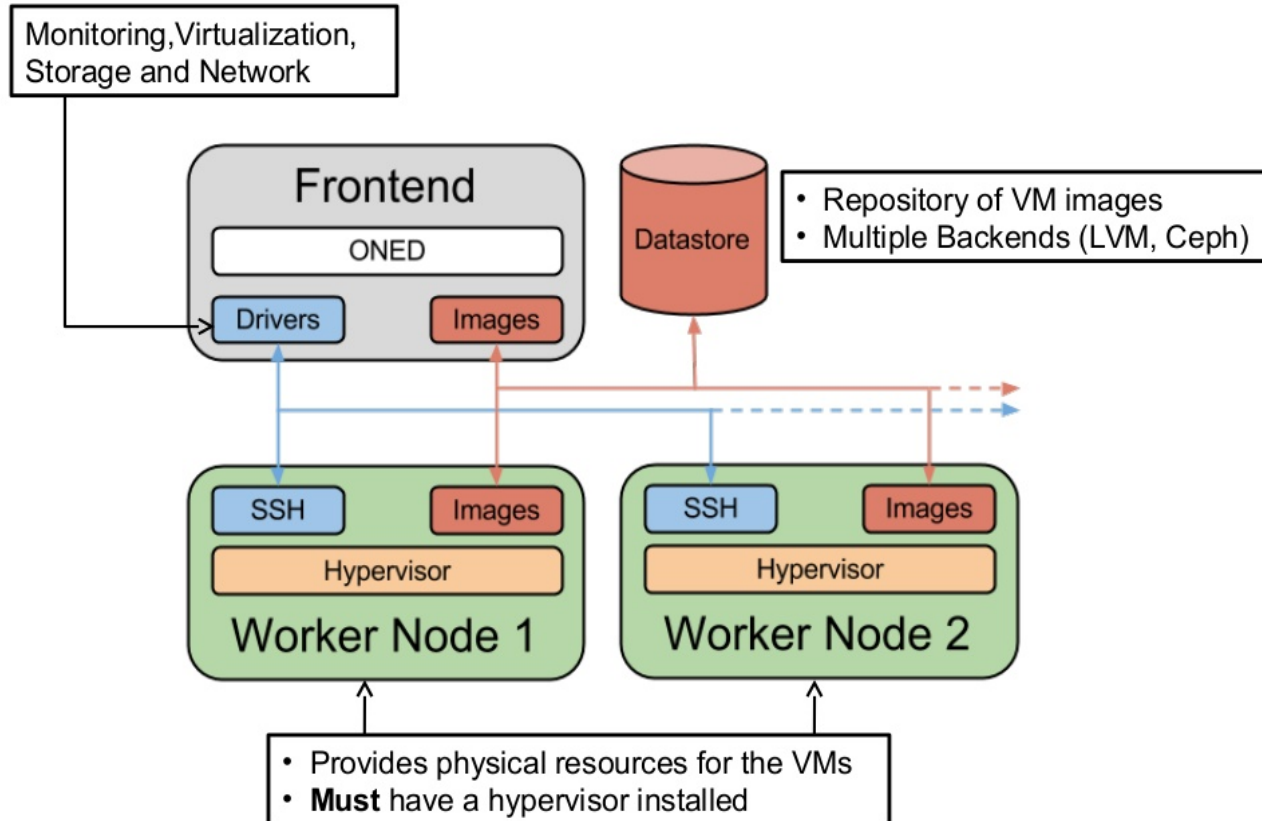

- Align cost on demand automatically
- Scalability
- Flexibly in growing in services

- **Fully open source**
- **Avoid vendor lock-in**, platform independent
- Simple, is **very** easy to install and update
- Mature, since 2008 this project is growing driven by user needs
- **Enterprise-class product**
- **Cloud Bursting**, extension of private clouds with resources from remote clouds
- **Multiple zones**, centralized management of multiple instances for scalability and isolation
- **Autoscaling**, creation of application flows with auto-scaling policies based on performance metrics and schedule

- The **implementation of an open cloud** management infrastructure enables us to **achieve the scalability** that we need and **strengthen the service**
- Lets us to **offer to our community of partners and users more services**
- **Continue adjusting the budget.**
- In the next years we've **planned to deploy an infrastructure over different geographical locations** and OpenNebula will help us to achieve this objective

Thank you for your attention

helping universities succeed
