

# eDiplomas

# Authenticity validation of diplomas issued by the Greek Higher Education Institutes (HEIs)

# OXI1: OPENX & INTEROPERABILITY

#### **Nikos Voutsinas**

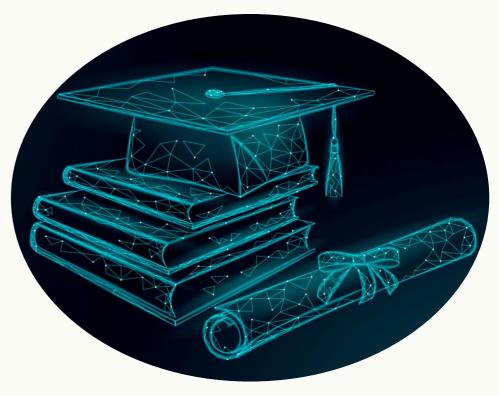

#### eDIPLOMAS AT A GLANCE

eDiplomas is an online platform that implements a mediator between the diplomas holder, the issuing institution and the authenticity validator (public or private entity)

#### **Key Traits:**

- ✓ It holds no diplomas data
- ✓ It incorporates signing and encryption mechanisms to offer enhanced privacy
- ✓ It follows a data centric design versus a document centric design

#### **KEY STAKEHOLDERS**

#### THE CITIZEN

Diploma holder and resource owner

#### THE HEI

Awarding legal entity and primary authoritative source

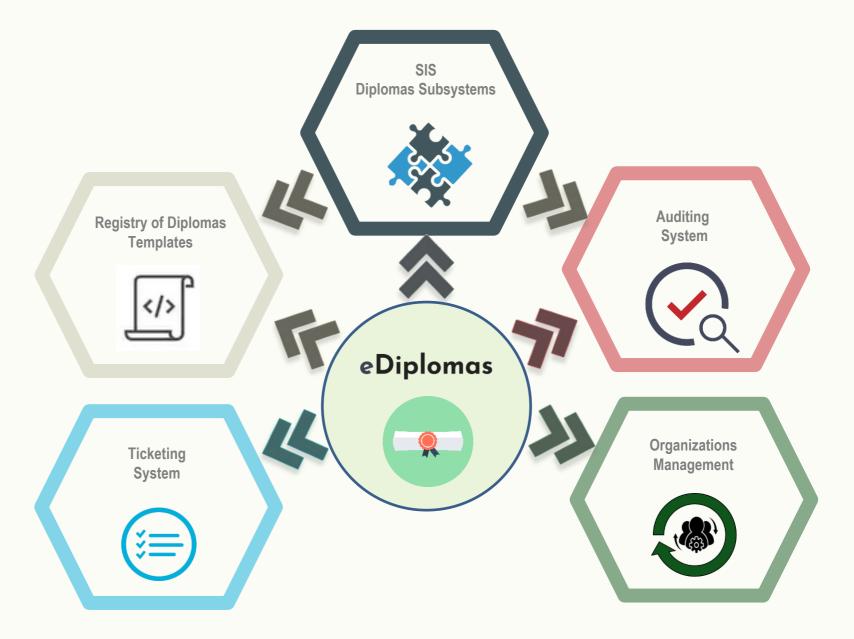

#### THE ORGANIZATION

Registered organizations that are entitled to act as validator upon approval

#### It's not just eDiplomas

#### eDIPLOMAS GOALS (2020)

# In product lifecycle terms eDiplomas has passed the phase of introduction and is now in growth phase

- Expand the deployment across all 25 Greek HEIs, and go beyond by supporting all educational levels
- Complete the development of the peripheral subsystems (Registry of Diplomas Templates, Auditing, Organizations Management)
- Synergize with corresponding initiatives across Europe (EBSI, EMREX, etc. )
- Release the platform as Open Source Software

#### **DESIGN CONSIDERATIONS**

## Leverages the national authentication service via a corresponding plugin

Does not depend on alumni institutional accounts 2.

Requires a linkage identifier between the National Authn Provider and the HEIs

Uses institutional authentication only for the helpdesk subsystem

#### AUTHORIZATION

eDiplomas provides flexible ways to authorize access to the different subsets of the diploma information.

Typically access requires prior holder's consent.

#### **Access Control**

Access is accomplished via OAUTH2 Authorization Code Grant method and JWT tokens

#### Diploma Scopes

Diplomas are made up of several scopes (subsets of information)

Access is granted to specific scopes

**Revocation** Access is granted for a limited lifetime

Holder can revoke access at any time

#### PRIVACY (1/2)

#### The request to HEI:

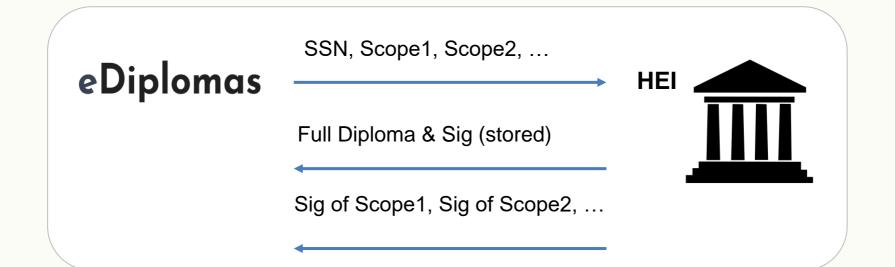

eDiplomas requests specific fields for the diplomas mapped to a specific SSN

HEIs respond with the matching diplomas, their signatures and the signature for each requested scope

eDiplomas verifies the persistent signature of the diploma

### 3.

#### PRIVACY (2/2)

The response to the Organization:

eDiplomas verifies the signature of each scope requested eDiplomas encrypts and signs the requested scopes and send the response to the client What's the security incident we need to protect from?

(Scope1,Sig1) (Scope2, Sig2), ...

#### eDiplomas

Organization App

Encrypts with the public key of the client

Signs with the private key of eDiplomas

#### DATA SCHEMAS (1/2)

Participating HEIs need to comply with certain data schemas in order for the consuming parties to be able to interpret the data accurately

Diploma templates are decoupled from holder's specific data

Diploma templates are made available as Open Data on a public registry Extensive use of Reference Data and Registries

Extends the digital diploma with the ISCED codes for educational fields and levels eDiplomas follows a data centric approach.

The artistic layout of the paper based diploma is out of scope

#### DATA SCHEMAS (2/2)

Dinlama

eD	ripiomas	
Issuer scope

Grade (Text)	Very Good	ПП
Grade (Value)	7.89	
Date scope		HEI Data Sources
Date Issued	17/12/2003	
Valid From	11/10/2003	

#### THE CLIENT SIDE IS PROVIDED BY THE ORGANIZATION

Registered organizations implement their own OAUTH2 Client to interface with eDiplomas and retrieve diploma information

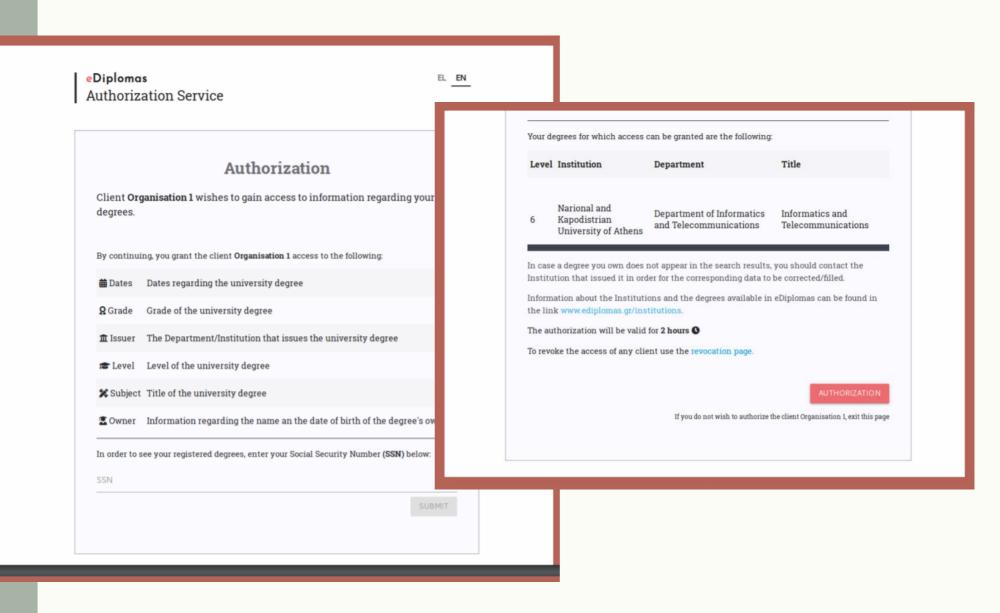

FLOW:

- 1. The flow starts from the organization's web page. Organization requests access to citizen's diploma and for that reason redirects the user to the eDiplomas authorization server.
- 2. Upon user consent the organization receives a token that allows the retrieval of the authorized diploma information

Note! User experience and handling of data depend on the organization's implementation

# THE CLIENT SIDE IS PROVIDED BY THE ORGANIZATION

#### THE CLIENT SIDE IS PROVIDED BY eDiplomas

Registered organizations without the ability to implement their own OATH2 Clients , use instead the eDiplomas Interface for Organizations

FLOW:

- 1. The flow starts at the eDiplomas Citizens Interface. Users select the organization they want to grant access to and receive a unique hash key for the specific case
- 2. Authorized personnel of the organization, via the eDiplomas Organizations interface gets access to user's diploma by using the hash key

#### **EX OFFICIO DIPLOMAS AUTHENTICITY CHECKS**

Authoritative state bodies, need to verify the authenticity of already submitted to them diplomas

FLOW:

- 1. Entitled organizations, via authorized personnel, use the eDiplomas Organizations Interface to access Ex Officio authenticity checks
- 2. By filling in a combination of data found in the hard copy diploma they verify the authenticity of the diploma

Note! Ex-Officio authenticity check also requires HEI's consent on organization basis

#### EX OFFICIO DIPLOMAS AUTHENTICITY CHECKS

#### **Ex-Officio Degree Check**

By using the ex-officio degree check service, you will be able to verify the validity of degree copies you have in your possession, if you are authorized by the Institution in charge.

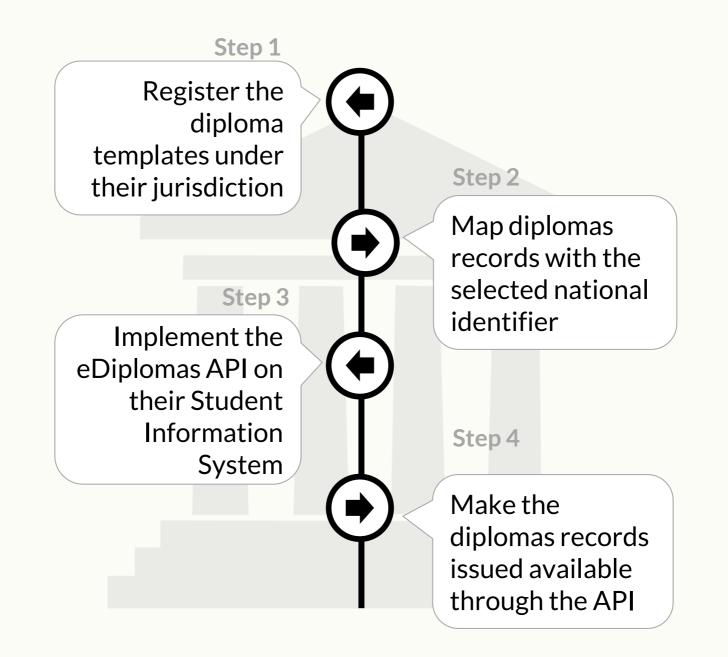

By filling the **Insitution**, the **Social Security Number (SSN)**, as well as various data regarding the degree, you can search for it in the platform and receive the **signed**, **digital** version issued by *eDiplomas*.

#### **HEIs: STEPS TO JOIN EDIPLOMAS**

#### HEIs: HOW TO REGISTER DIPLOMAS

There are two paths that HEIs can follow to make diplomas available to the platform:

#### • Online or Batch Mode

HEIs make available diplomas on per department or per program basis via a batch process, periodically or online whenever a diploma is issued at the SIS level.

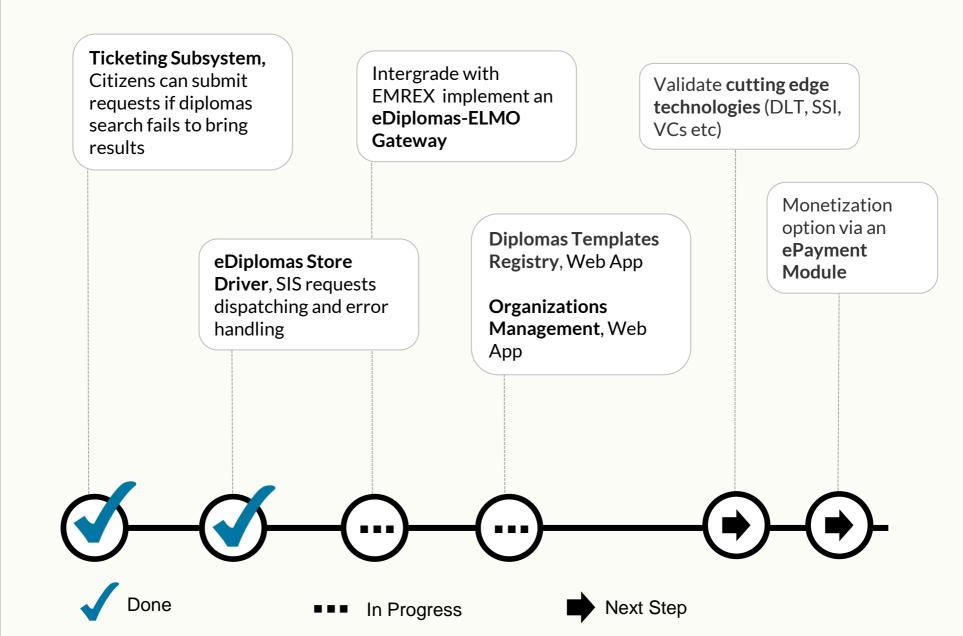

#### • Upon Citizen's Request

The citizen can submit a ticket via the eDiplomas interface in order to notify the institution about a missing diplomas or about an error. The request is handled by the institution staff through the eDiplomas Ticketing System.

Note! The option for citizens to submit requests is enabled per institution

#### THE ROADMAP

#### **TECHNOLOGIES**

# JOSE: JSON object signing and encryption JWT: JSON Web Tokens
