Data Governance at the National Information Processing Institute in Poland

Emil Podwysocki

Maria Bylina

“The 21st century belongs to those who treat information as a strategic company resource. Information management, data resource management, and information quality and its improvement should become a natural element in the strategic planning process, both in the short and long term.”

Larry English - INFORMATION IMPACT International, Inc.

The Data Governance Act (DGA)

The Data Governance Act (DGA) aims to create a legal framework for data sharing for the benefit of the European single market, ensuring neutral access to data and interoperability, as well as helping to avoid lock-in effects (recital 2 DGA). The European Parliament adopted the DGA on **6 April, 2022**. As a regulation, the DGA does not have to be transposed into national law by EU member states. It entered into force 23 June, 2022. It will be applicable after a transitional period of 15 months from **24 September, 2023**.

The Data Governance Act (DGA)

Increase data availability

- ✓ **Reuse** of certain categories of protected data held by public sector bodies
- ✓ **Data intermediation services** as a "key role in the data economy"
- ✓ **Data altruism** – increasing the availability of data by voluntarily donating it

The FAIR data principles

Findability

Accessibility

Interoperability

Reusability

Introduction to the data governance framework

Data governance

Data governance is a framework and set of processes that ensure the proper management of an organisation's data assets.

People

(Chief Data Officer, Data Steward, Data Owner, Data Quality Manager, etc.)

Processes

(formalised procedures for data discovery, classification, quality control, and access management)

Policies

(clearly defined rules and guidelines that govern data and metadata management, usage, security, and quality practices)

Standards

(data quality and data architecture)

Data governance - DAMA

DAMA International created the Data Management Framework (the DAMA Wheel) to illustrate how different subjects are interconnected.

The DAMA Wheel includes the 11 knowledge areas and places data governance at its centre to highlight how it underpins every data management activity.

Data governance pertains to the full lifecycle of data in an organisation (collection, storage, sharing, archiving, and deletion).

Data governance benefits

What are the benefits of implementing data governance?

- ✓ Enables an organisation to manage data as an asset
- ✓ Ensures that data is used properly, and people have access to the data they need to make business decisions
- ✓ Standardises data business definitions
- ✓ Improves data quality

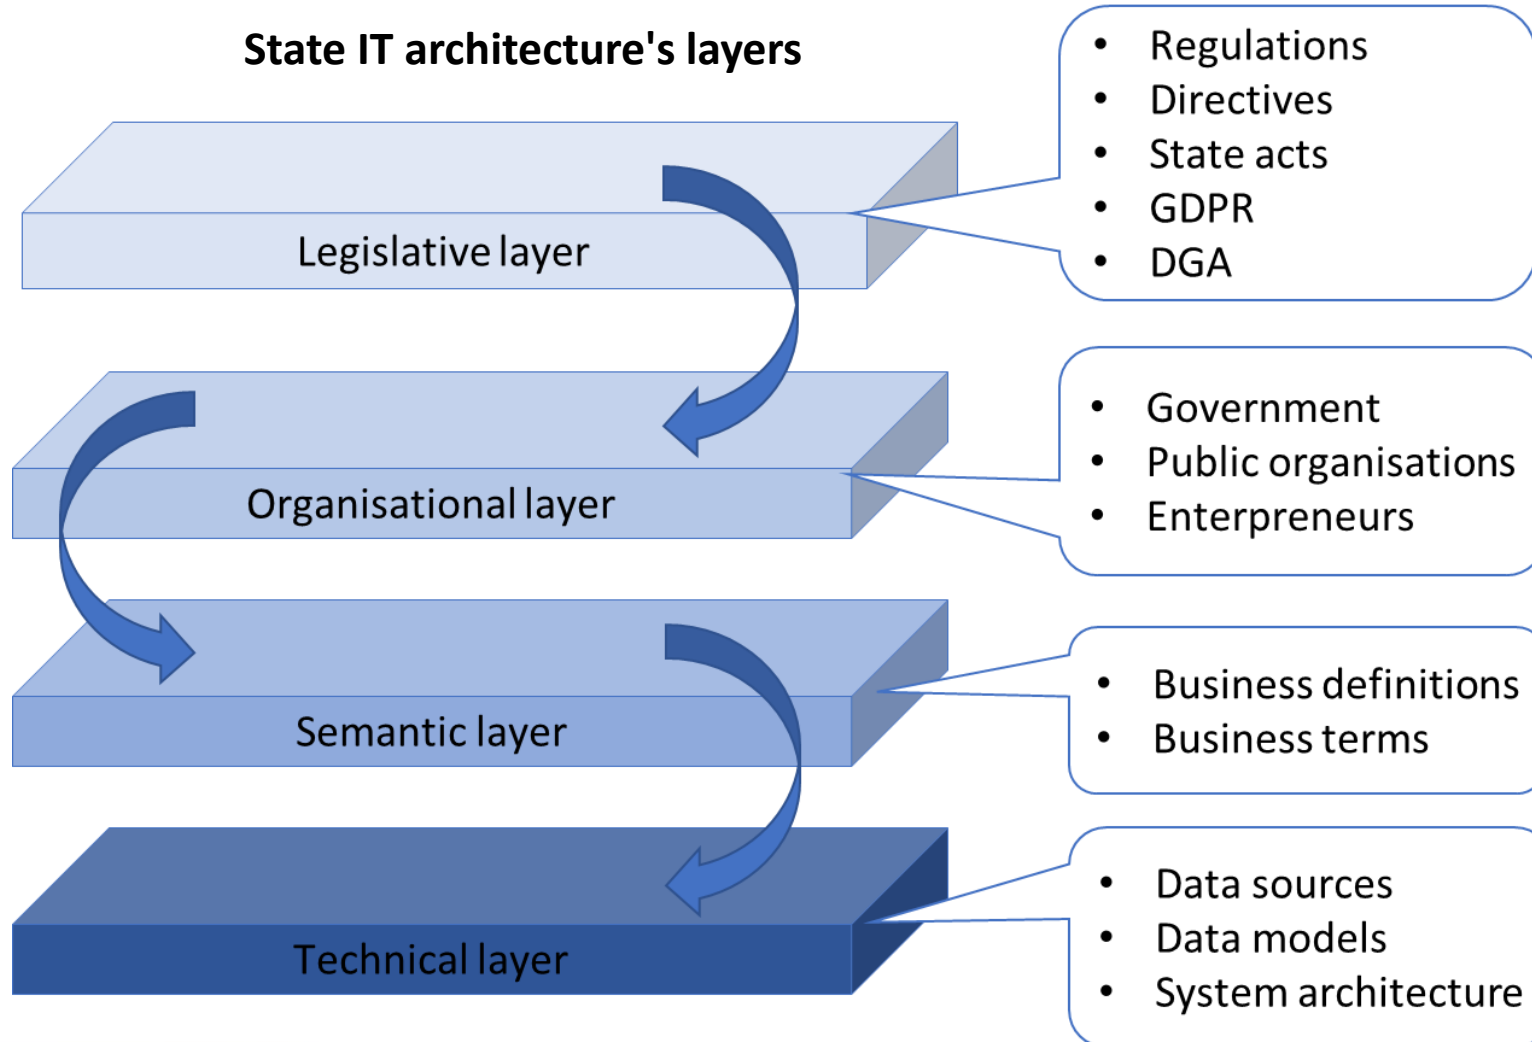

It's not a project, it's a process—a long term process.

Data governance in higher education and other sectors

- ✓ A wide variety of data governance interpretations in many sectors (e.g. finance, energy, telecommunications)
- ✓ Some universities in the United States have created new data governance units using different labels (e.g. data governance, institutional research, or data management/analytics), while others have extended IT governance or information governance to data governance.
- ✓ EDUCAUSE – a nonprofit association (USA), whose mission is to advance higher education through the use of information technology, published *2023 EDUCAUSE Horizon Action Plan: Data Governance*.
- ✓ Some institutional data governance programmes (such as that of the University of Toronto in Canada) have been implemented at particular universities, but not centrally.
- ✓ In science and higher education in Poland, only OPI PIB can undertake such tasks.
- ✓ Within the European Union, the CERIF and HERM models have been implemented; however, they do not cover the entire thematic range of data collected at OPI PIB.

Data governance – part of the State Information Architecture (AIP)

State IT architecture's layers

Data governance is a cornerstone of the state policy for IT system architecture.

The data governance framework implemented at OPI PIB should be consistent with its assumptions.

Implementing data governance at OPI PIB

The Data Governance Maturity model and business case

Data Governance Maturity Model – Gartner

source: <https://www.hitechnectar.com/blogs/data-governance-maturity-models-explained/>

The first exercise involved assessing OPI PIB's awareness and maturity in data management. According to the Gartner Data Governance Maturity model, we evaluated the institute's awareness between levels 1 and 2. This indicated that OPI PIB needed to work on implementing a data governance framework.

Building the team – challenges

Data governance is created by people for people, and people are the most valuable part of the process.

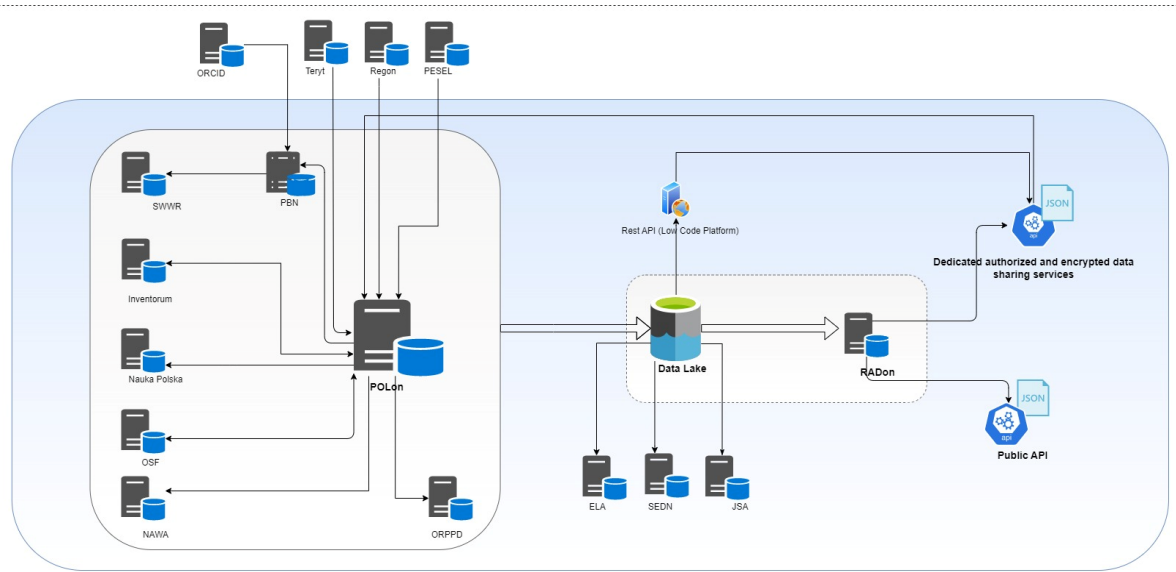

People in the process

- ✓ Chief Data Officer
- ✓ Data Steward
- ✓ Data Owner
- ✓ Data Custodian Officer
- ✓ Data Quality Manager

Challenges

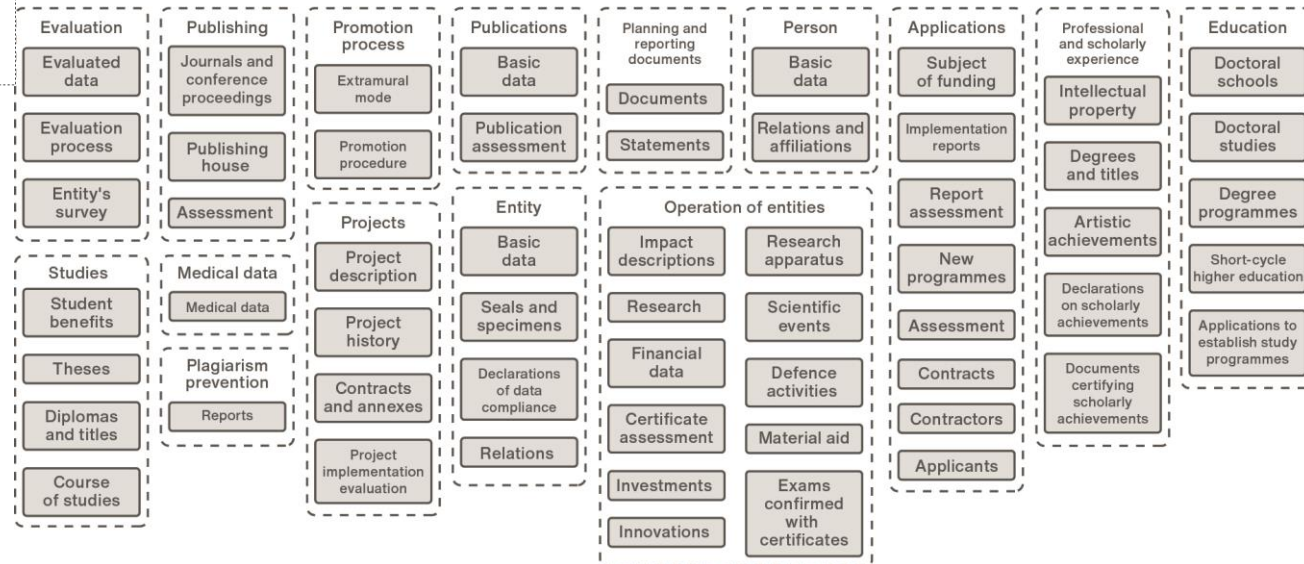

- ✓ Flat organisational structure
- ✓ No additional resources (FTE)
- ✓ Change management (fear of change)

Data inventory

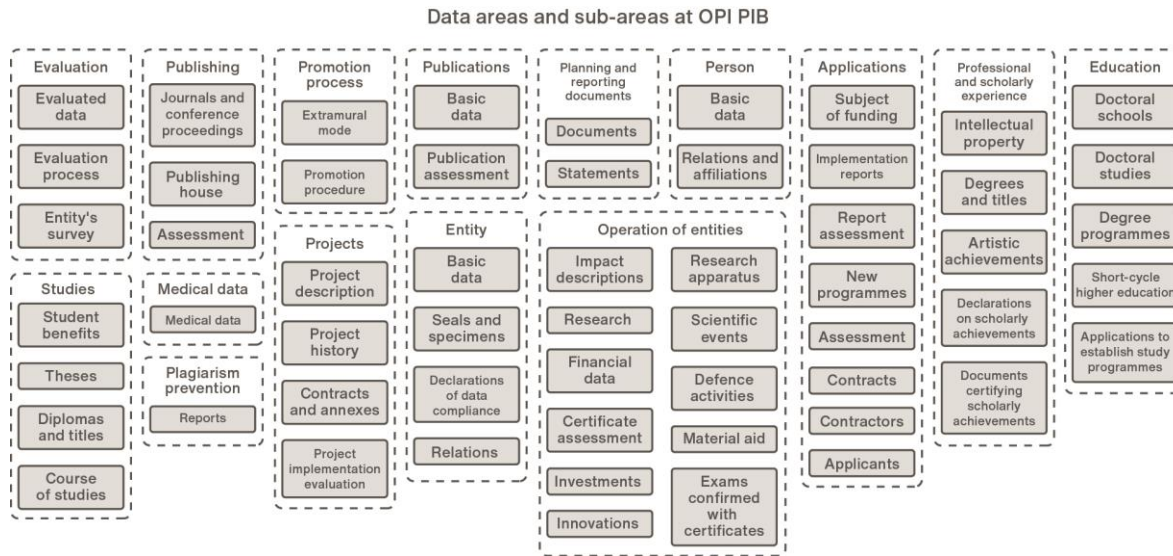

Data areas and sub-areas at OPI PIB

OPI PIB holds approximately 12 TB of data. The institute provides answers to questions from journalists, agencies, and other stakeholders, as well as clarifying issues related to the definition of data, and the possibility of reprocessing it or making it available to the public.

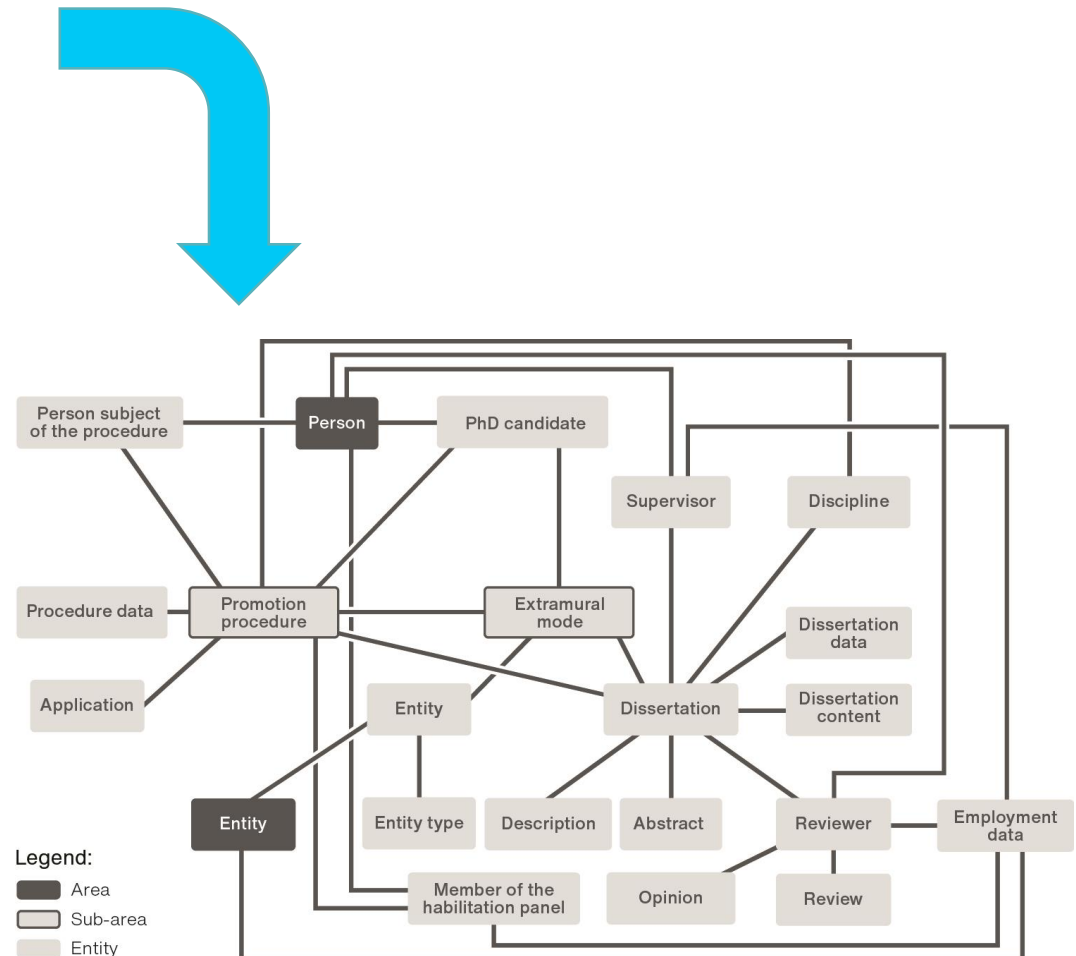

Enterprise data model

An enterprise data model is a type of integration model that covers all (in practice, most) of the data of an enterprise.

An enterprise architecture may include enterprise-wide data models that are also conceptual, logical, or physical (West M. 2011).

Data metrics

| AREA | HIGHER EDUCATION |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AREA DESCRIPTION | Data related to universities, research institutes, and educational and higher education institutions |
| INFORMATION SCOPE | The area covers identification, registration and basic data, addresses of registered offices and correspondence addresses, contact details, and details of the head of the unit. |
| DOMAIN | POL-on, OSF, NAWA |
| GROUPING LEVEL | Category |
| STAKEHOLDERS | Data Owner, Head of ... |

Proof of concept with the data catalog

After several months working with data governance, we began to search for an IT tool that could help OPI PIB in data management processes. We conducted research and compared five of the most prominent ones:

- ✓ Oracle Data Catalog (ODC) - <https://docs.oracle.com/en-us/iaas/data-catalog>
- ✓ AtaccamaOne (ATA) - <https://www.ataccama.com>
- ✓ Atlan (ATL) - <https://docs.atlan.com>
- ✓ Collibra (COL) - <https://marketplace.collibra.com>
- ✓ Talend (TAL) - <https://help.talend.com>

Comparison of data catalog tools

Available (selected) data connectors:

| | ODC | ATA | ATL | COL | TAL |
|----------------------|-----|-----|-----|-----|-----|
| ORACLE DB | ✓ | ✓ | ✓ | ✓ | ✓ |
| MYSQL | ✓ | ✓ | ✓ | ✓ | ✓ |
| POSTGRESQL | ✓ | ✓ | ✓ | ✓ | ✓ |
| MICROSOFT SQL SERVER | ✓ | ✓ | | ✓ | ✓ |
| MONGO DB | | ✓ | | ✓ | ✓ |
| CSV | ✓ | ✓ | | ✓ | ✓ |
| XLSX | ✓ | ✓ | | ✓ | ✓ |
| XML | ✓ | ✓ | | ✓ | ✓ |
| JSON | ✓ | ✓ | | ✓ | |
| APACHE KAFKA | ✓ | ✓ | | ✓ | ✓ |
| HIVE | ✓ | ✓ | ✓ | ✓ | ✓ |
| ELASTIC | | ✓ | | | ✓ |
| JIRA | | | ✓ | | |
| AZURE | ✓ | ✓ | ✓ | ✓ | ✓ |

Comparison of data catalog tools

Available (selected) functionalities:

| | ODC | ATA | ATL | COL | TAL |
|--------------------------------------------------------------|-----|-----|-----|-----|-----|
| DATA MODELING CONCEPTUALISATION | ✓ | ✓ | ✓ | ✓ | ✓ |
| DICTIONARIES | ✓ | ✓ | ✓ | ✓ | ✓ |
| CLASSIFICATIONS | ✓ | ✓ | ✓ | ✓ | ✓ |
| DATA QUALITY | | ✓ | | ✓ | ✓ |
| DATA LINEAGE | | ✓ | ✓ | ✓ | ✓ |
| EMBEDDED AI (CLASSIFICATIONS, PROFILING, RELATIONS...) | ✓ | ✓ | | ✓ | ✓ |

Data catalog at OPI PIB

Although the comparison above contains empty cells, all tools available on the market are similar. When functionalities are unavailable 'out of the box', we can source add-ons from the same vendor (although they require additional payment). For instance, Oracle and Atlan have separate tools related to data quality and data lineage. No data catalog tools have data modeling functionalities included; separate tools are necessary. Ultimately, we decided to use Oracle Data Catalog, because it is included in Oracle Cloud Infrastructure and does not require any additional fee.

The screenshot displays the Oracle Data Catalog web interface. At the top, the Oracle Cloud logo and 'data catalog' search bar are visible. The navigation menu includes 'Home', 'Data assets', 'Categories and terms', 'Discover d...', 'Data entities', and 'Employees'. A search bar with the placeholder 'Search for data objects' and a 'Search' button is present. Below the search bar, it indicates 'Approximately 6.0K objects as of Fri, Feb 10, 2023, 01:01:07 PM UTC'. A horizontal list of filters shows: 'Data assets (10)', 'Data entities (576)', 'Glossaries (1)', 'Categories and terms (26)', 'Jobs (24)', 'Schedules', and 'Custom properties (2)'. The main content area is divided into four panels: 'Quick actions' with links like 'Browse data assets', 'Create data asset', 'Discover data sources', 'Manage custom properties', 'Manage filename patterns', and 'Show failed jobs'; 'Data assets by type' featuring a pie chart; 'Popular Data Catalog tags' with a word cloud; and 'Learn' with links to 'Data Catalog overview', 'Service tour', 'User guide', 'Rest API', 'Tutorials', and 'Release notes'.

| Database Type | Count | Percentage |
|---------------|-------|------------|
| Oracle DB | 4 | 40% |
| PostgreSQL | 4 | 40% |
| Kafka | 1 | 10% |
| Obj Store | 1 | 10% |

PAŃSTWOWY INSTYTUT BADAWCZY

Conclusions

Legal aspects

- ✓ As an organisation, we are ready for the Data Governance Act
- ✓ We are fully GDPR compliant
- ✓ We respect the FAIR data principles (radon.nauka.gov.pl)
- ✓ We have adapted to State's Information Architecture (AIP)

Data governance experience

- ✓ The work involved in implementing elements of the data governance programme at OPI PIB has led to deeper understanding of how crucial proper data management is for organisations.
- ✓ From the perspective of OPI PIB, the implementation of data governance has contributed to increasing the quality of data, but above all to increasing the awareness of those responsible for the analysis and design of IT systems.
- ✓ The implementation of data governance has already delivered measurable benefits in shortening the time necessary for analysis and obtainment of information for external stakeholders.
- ✓ Nevertheless, challenges remain.
